

Installation NV-Verlag digital charts for WinGPS 4

4 AUGUST 2008

BEWARE!!! Ostsee Serie 2 and 4 instructions on the back!!

1. Installation and Registration on the hard drive

- a. Place the disk in the CD-Rom drive. If the setup does not start automatically, go through 'My Computer' to the cd-rom drive and double click on the program 'Setup.exe'.

Windows Vista: Choose the Start Menu and go to Computer. Open the cd-rom drive and right click the file 'setup.exe'. Now choose 'Run as administrator'.

- b. After selecting the language (we use English in this manual) accept the license agreement and fill in the registration form.
- c. Fill in the Product ID (which you can find in the CD Cover) and fill in your name and e-mail address.
- d. With an Internet connection you can easily register the charts by clicking the 'Online' button. When you do not have an Internet connection click 'Offline' and follow the on-screen instructions to register the charts.

- e. Now choose the directory where you want to install the charts. Default the setup chooses 'c:\chartkit\bsbcharts\' . We advise you to install the charts in a directory with the chart-set-name as directory name. When you do this it is easier to separate different chart sets (for an example 'c:\chartkit\bsbcharts\FR1' for the FR1 chart set). Now you can click on 'Install' for the chart installation.
- f. *If you want to install more than one NV-Verlag chart you need to restart your computer after every set. When problems occur during the installation it can help to perform the installation again.*

2. Prepare the charts for usage with WinGPS 4 and DKW Manager (v1.3.11.0 or later)

- a. To install the charts you need at least DKW Manager v1.3.11.0. You can download it from <http://www.stentec.com/anonftp/pub/dkw/dkwmanagersetup.exe>
- b. **WARNING!: When you install the Ostsee Serie 2 or Ostsee Serie 4 charts read the instructions on the backside of this paper!**
- c. Start DKW Manager and choose for Install. Now choose 'BSB Charts' and click 'Next'.
- d. Select the option 'Install from a folder on the hard drive' and browse for the folder used in step **1E**. Click 'OK' and 'Next'.
- e. DKW Manager will now show the charts found in the folder. Choose 'Next'
- f. Now choose 'Install to a new chartset' and enter the chartset name. *For the FR1 you can use 'FR1 – France Channel Coast'. By doing this you can easily separate the charts in WinGPS 4.* Choose 'Install' and the charts will be installed.

Ostsee Serie 2 and Ostsee Serie 4 installation notes

When you installed these charts in step 2E some charts will give the message 'Edition information of the chart.....'. You can prevent this message by downloading a file from the Stentec website.

1. Start your web browser and go to <http://www.stentec.com/anonftp/pub/nvverlag/>
2. Download the right file. For instance Ostsee Serie 2 this is '[Serie 2.zip](#)'
3. Now extract the files inside this archive to the installation directory from step 1E. If you get the message to overwrite some .bsb files you must do this.
4. The installation can now be continued with step 2c

Notice: Some NV verlag 2008 cd-roms contain the same problems as the Ostsee Serie 2 and 4 cd-roms. This will only occur when the cd-roms are printed before 21st April 2008. This concerns the following charts:

DE1, DE2, NL1, NL2, FR2, MED2, MED3 and the **NVBINN01**. You can also find the BSB corrections on our website.

If something is unclear or when you have other questions, you can always e-mail our helpdesk(helpdesk@stentec.com).
